# **Centaur®** Robustly flexible fencing

**Centaur horse fencing** is the strongest and safest horse fencing on the market, and an attractive and low-maintenance alternative to wooden post and rail fencing.

It uses polymer rails which are installed in one long, continuous line, so that the force of any impact is distributed throughout the entire fence. The rails have built-in flexibility, so they don't break or splinter, keeping your horse safely contained and injury-free.

Centaur fences look great too. Available in white or brown, they withstand even the worst of weather without ever needing painting. In fact maintenance requirements are minimal – these fences last for years and can be easily re-tightened if required.

## **Centaur HTP®**

Centaur HTP® is the original Centaur fencing system. Perfect for perimeters, race tracks, arenas, walkways, corrals and other dividing fences, it incorporates a patented insulated 'belt loop' bracket with a steel core which the rail slips through to disperse the effects of any sudden impact.

## **Centaur HTP Hot-Rail®**

Hot-Rail® is an innovative fencing product that combines the patented Centaur HTP® technology with electric fencing, significantly improving the appearance and lifespan of electric fencing products currently available.

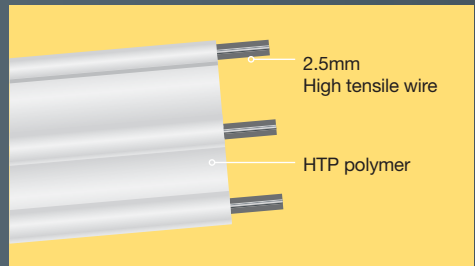

**A customer told us, “I can now rest easy knowing that there will be no more kicking off rails or injuries should any of our horses get spooked. Safety was a major concern in choosing our fencing, particularly for young stock, and I can’t imagine a solution that would give me the level of peace of mind that Centaur does.”**

**Chantal Walton, Equichoice – Lincolnshire**

## CenFlex™ HTP®

CenFlex™ HTP® is a lighter alternative to the traditional Centaur HTP®. It utilises the same polymer technology and is ideal for use in areas of reduced pressure or when fencing on a budget.

## Lightning®

Lightning® is a highly visible permanent electric fence engineered for durability and resistance to wear. Lightning® installs like high tensile wire but offers far greater protection to horses. Any number of line wires can be installed and the system easily combines with other Centaur and Tornado fences.

# Centaur<sup>®</sup> Eliminates breaks and splinters

The flexible design enables the fencing systems to withstand impact without risking injury to the horse, avoiding caught legs and entanglement injuries.

The patented insulated “Belt Loop” bracketing system allows the rail to slip through the bracket, dispersing impact. The polymer brackets are manufactured with a steel core adding strength and durability.
